Directeur GéoData

Esri France

mars.2023

**OVERTURE MAPS**  
FOUNDATION

# La data, le terreau de tous vos projets

Avec les bonnes données,  
faites éclore tous vos  
projets et analyses

Des analyses spatiales pertinentes au service de décisions éclairées impliquent le recours à des données à jour et de qualité.

Les équipes « data » d'Esri France vous accompagnent sur des sujets tant géographiques que socio-démo-économiques.

Nous vous conseillons afin de mettre en place le meilleur des terreaux pour vos projets.

Powering current and next-generation map products by creating reliable, easy-to-use, and interoperable open map data

## Who is Overture for?

Overture is for developers who build map services or use geospatial data.

# Why Overture?

## Collaborative Map Building

Sourcing and curating high-quality, up-to-date, and comprehensive map data from disparate sources is difficult and expensive.

Overture aims to incorporate map data from multiple sources including Overture Members, civic organizations, and open data sources.

# Why Overture?

## Collaborative Map Building

Sourcing and curating high-quality, up-to-date, and comprehensive map data from disparate sources is difficult and expensive.

Overture aims to incorporate map data from multiple sources including Overture Members, civic organizations, and open data sources.

## Global Entity Reference System

Multiple datasets reference the same real-world entities using their own conventions and vocabulary, making them difficult to merge and combine.

Overture Maps will simplify interoperability by providing a system that links entities from different data sets to the same real-world entities.

# Why Overture?

## Collaborative Map Building

Sourcing and curating high-quality, up-to-date, and comprehensive map data from disparate sources is difficult and expensive.

Overture aims to incorporate map data from multiple sources including Overture Members, civic organizations, and open data sources.

## Global Entity Reference System

Multiple datasets reference the same real-world entities using their own conventions and vocabulary, making them difficult to merge and combine.

Overture Maps will simplify interoperability by providing a system that links entities from different data sets to the same real-world entities.

## Quality Assurance Processes

Map data is vulnerable to errors and inconsistencies.

Overture Maps data will undergo validation checks to detect map errors, breakage, and vandalism to help ensure that map data can be used in production systems.

# Why Overture?

## Collaborative Map Building

Sourcing and curating high-quality, up-to-date, and comprehensive map data from disparate sources is difficult and expensive.

Overture aims to incorporate map data from multiple sources including Overture Members, civic organizations, and open data sources.

## Global Entity Reference System

Multiple datasets reference the same real-world entities using their own conventions and vocabulary, making them difficult to merge and combine.

Overture Maps will simplify interoperability by providing a system that links entities from different data sets to the same real-world entities.

## Quality Assurance Processes

Map data is vulnerable to errors and inconsistencies.

Overture Maps data will undergo validation checks to detect map errors, breakage, and vandalism to help ensure that map data can be used in production systems.

## Structured Data Schema

Open map data can lack the structure needed to easily build map products.

Overture will define and drive adoption of a common, well-structured, and documented data schema to create an easy-to-use ecosystem of map data.

## Steering Members

---

## General Members

---

## Contributor Members

# Working Groups

The work of Overture happens in Working Groups that are open to all Overture members.

## Schema Working Group

Designs the Data Schema and the Global Entity Reference System to deliver easy-to-use, and interoperable open map data.

## Basemap Working Group

Conflates open map data, applies advanced quality processes, and manages Overture releases in line with specifications from the Schema Working Group.

# Overture Maps Foundation - Esri

## De nombreux axes de collaboration motivant notre implication

- **Soutenir** la vision partagée depuis de longues années
- **Participer** aux groupes de travail
- **Alimenter** Overture Maps (en données via le programme Community Maps, en technologies, ...)
- **Renforcer** nos relations techniques avec tous les membres de cette fondation
- **Disposer** de nouvelles sources de données pour nos solutions (et surtout pour nos utilisateurs)
- **Encourager** nos utilisateurs à contribuer (incitation / promotion, briques technologiques, ...)
- ...

**Quelles sont vos questions ?**

# Quelles sont vos questions ?

## Possiblement selon le temps imparti ...

- **Planning ?**
- **Quelles licences ?**
- **Quels jeux de données ?**
- **Quelles possibilités de reprises par la communauté OSM notamment ?**
- ...

**Merci pour votre attention**
