Submitted on 4 Oct 2016

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Context of DAOBS project

- > **DAOBS : a web application for creating & publishing dashboards**
- > **Developed in MIWP-16 (monitoring & reporting)**
 - Working group composed of experts from member states : FR, NL, DE, UK, IT, PL, ...
 - Conducted by European Environment Agency (EEA)
- > **European dashboard :**
 - <https://inspire-dashboard.eea.europa.eu/official>
- > **Based on Solr (search engine) & Banana (dashboard)**
- > **Published as open source (EUPL license) :**
 - <https://github.com/INSPIRE-MIF/daobs>

Objectives of DAOBS project

> Simplify INSPIRE reporting process

- Compute indicators from metadata catalogues (from MS)
- Provide XML file to European Commission

> Show evolution of indicators in INSPIRE dashboards

MONITORING REPORT AVAILABLE PER YEAR

Dashboard / Statistics by resource type

TYPE OF RESOURCES

dataset (25,700) service (3,950)
series (780) feature (2)
nonGeographicDataset (1)

TYPE OF SERVICES

Télécharger (1,531) view (1,432)
invoke (748) discovery (79)

TYPE OF DATASETS

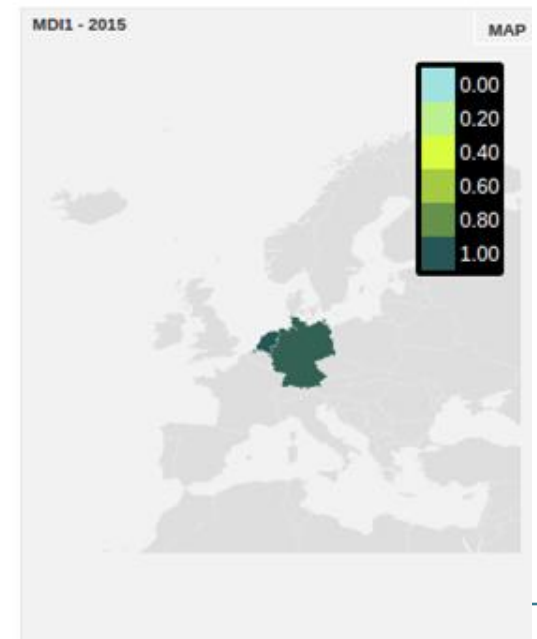

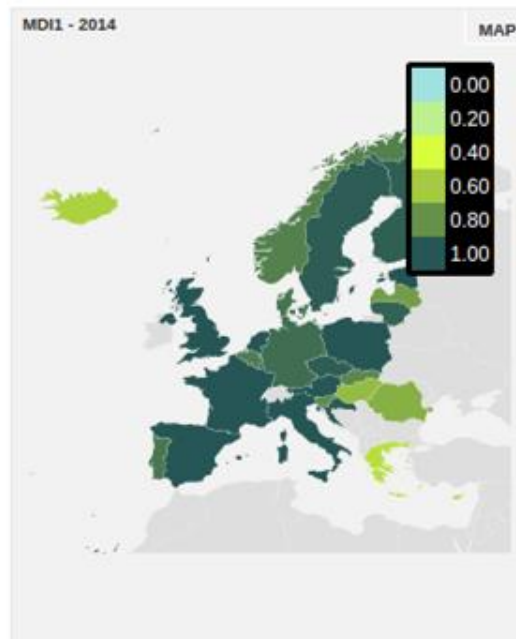

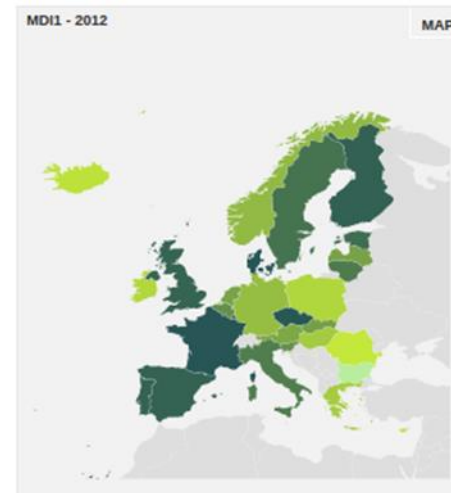

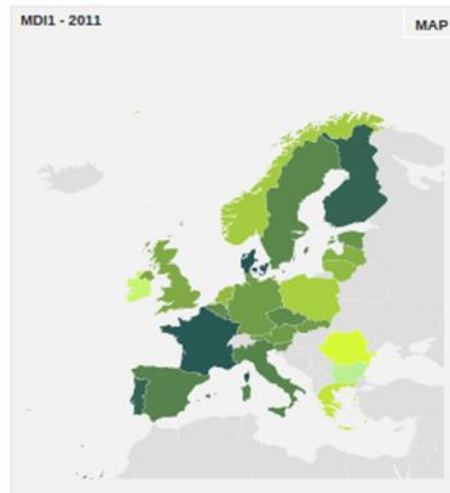

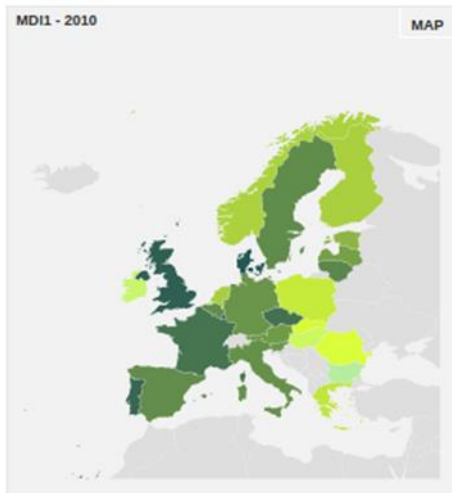

vector (13,537) grid (1,602)
textTable (223) tin (18) Vector (6)

Dashboard / Number of network services

Dashboard / Existence of metadata at european level

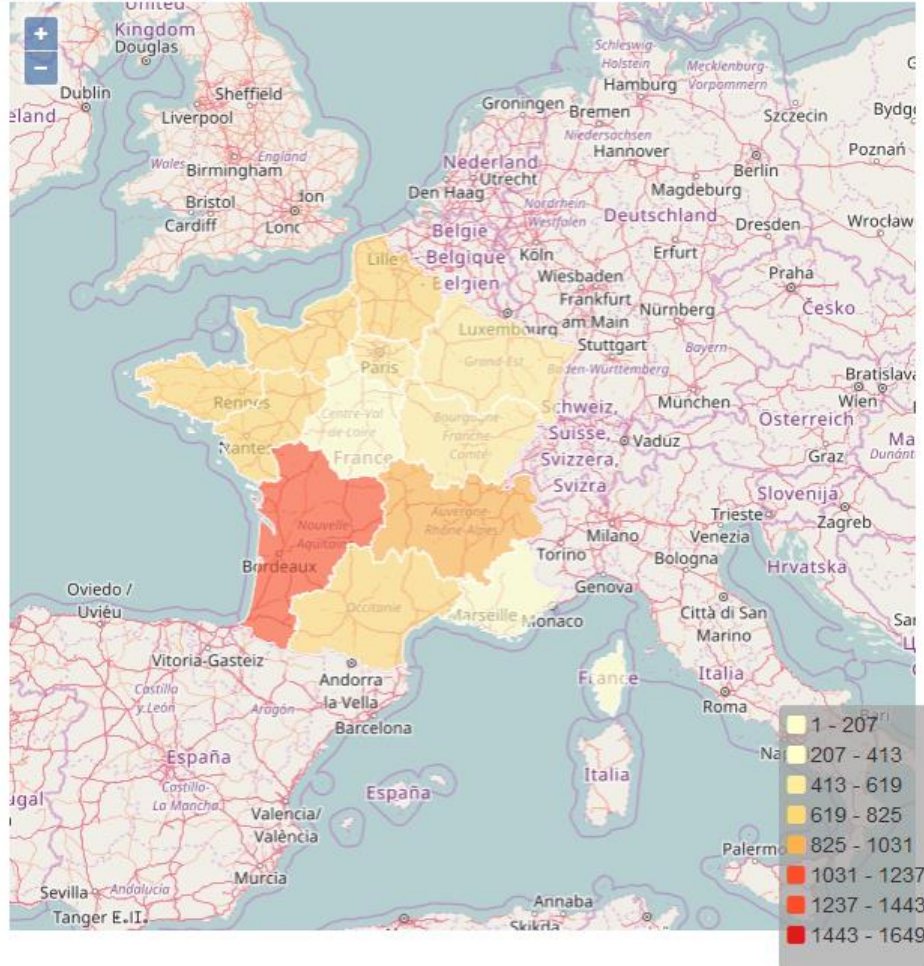

Dashboard / Implementation in France

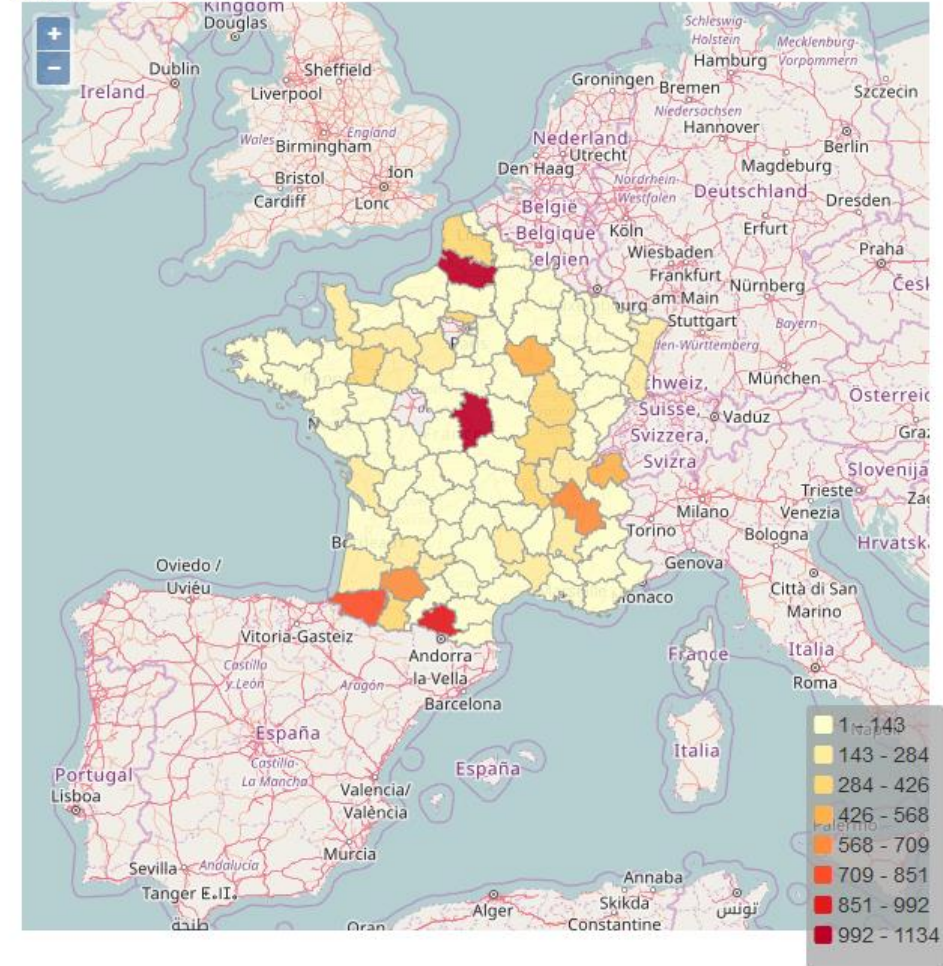

- > DAOBS has been implemented in french infrastructure (Geocatalogue.fr)**
- > The dashboard is an important tool for decision making**
- > But, we need to have specific indicators :**
 - at local level (eg. regional maps)
 - by data producers
 - by SDI (eg. Sextant)
 - Number of open data
- > ...to have their evolution at different time-scales**
- > ...and the user interface in french!**
- > So, we have evolved the dashboard**

Indicators at local level : Existence of metadata

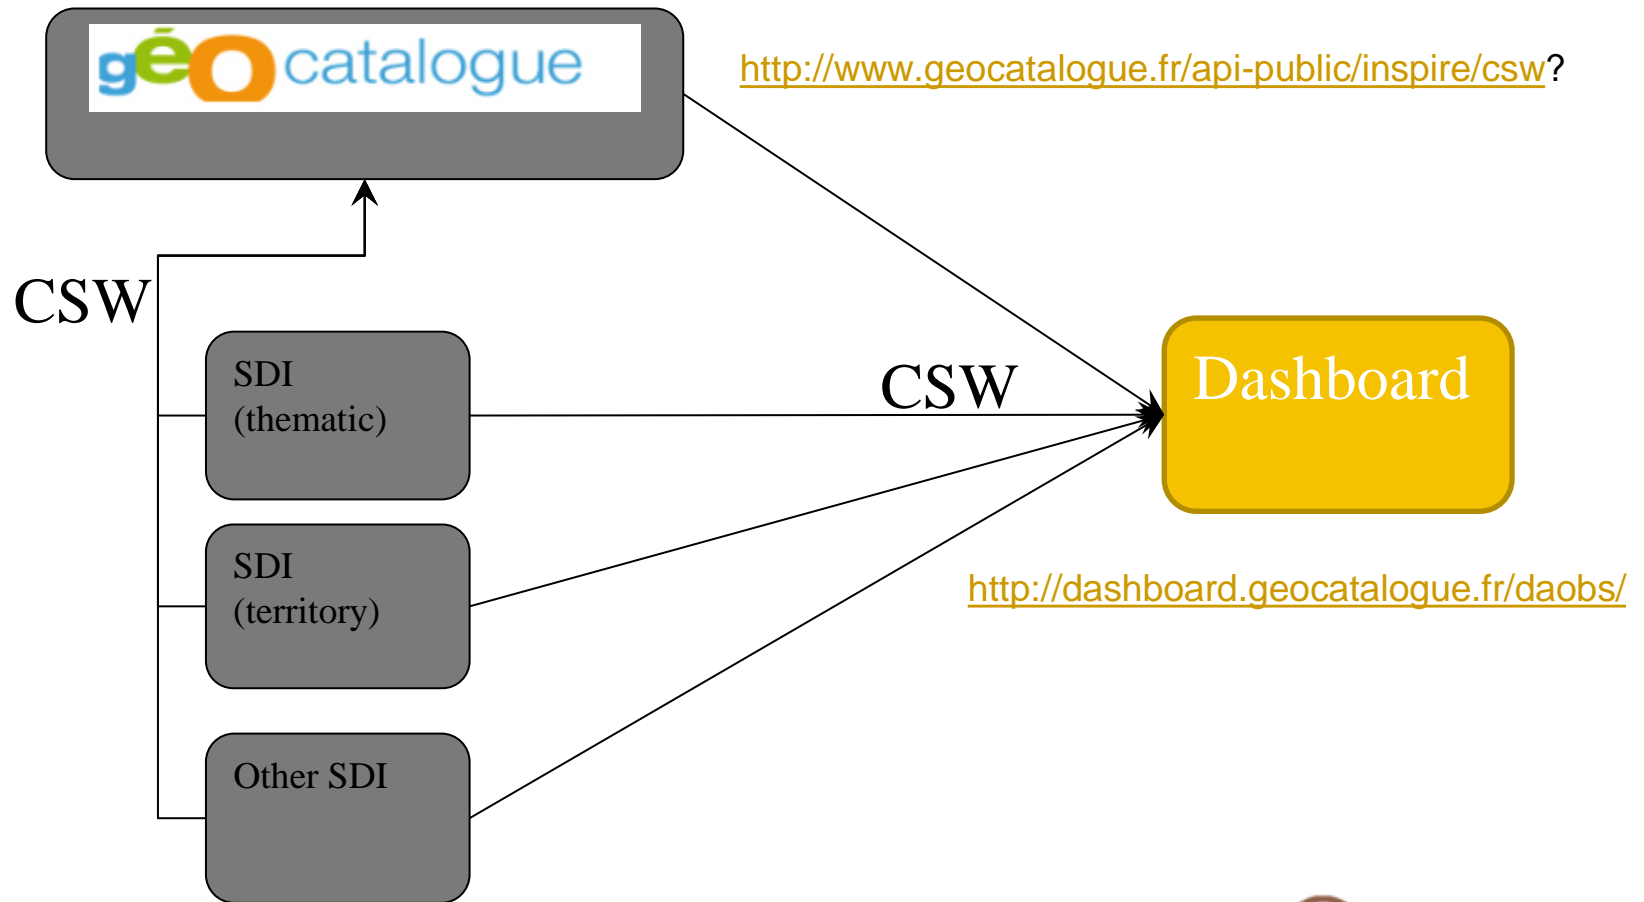

NB DE FICHES PAR RÉGION

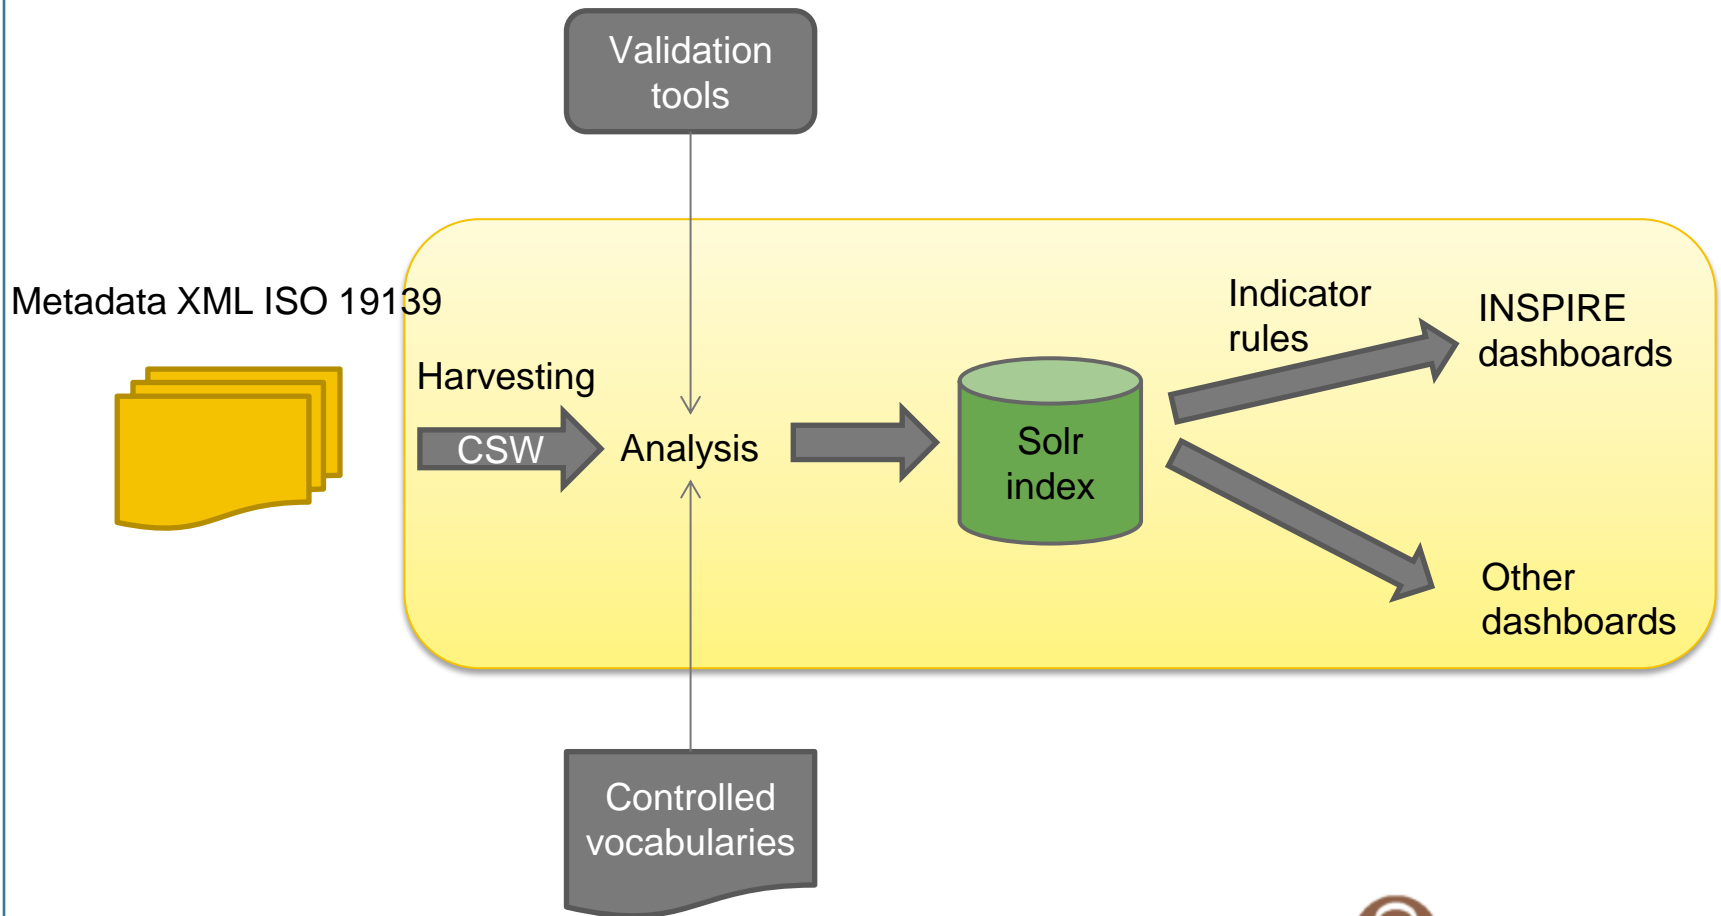

NB DE FICHES PAR DÉPARTEMENT

Dashboard / Harvesting

Dashboard / Analysis

Dashboard / Analysis

> **Each metadata element is stored in Solr index**

> **Dashboard use Solr fields :**

- From XML ISO 19139 metadata (e.g. gmd:title)
- Computed from metadata (e.g. isOpendata = yes/no)
- Link between metadata (recordOperatedBy)
- Synonyms from controlled vocabularies (e.g. producers)

Dashboard / Analysis

eg. INSPIRE codelists

Dashboard / Analysis

eg. Synonyms analysis

record

➡ **Direction Départementale des
Territoires de la Loire (DDT 42)**

➡ Département de la Loire (42)

Dashboard / Analysis

> **Coupled with other applications**

- ETF for services validation
- JRC validator or Geocatalogue.fr for metadata validation

Dashboard / Validation report

Validation is computed using the [INSPIRE validator](#).

A record is considered valid for INSPIRE if completeness indicator is above 75% (see `isAboveThreshold` field).

Even if completeness indicator is 100%, a record may be displayed as invalid in the INSPIRE validation chart due to INSPIRE validation warnings (eg. if the URL of a coupled resource point to an invalid link).

Conformity of datasets and services is declared in the metadata records.

Schedule (not available yet)

Report on **Monitoring Indicators** generated for **NL** based on **417 record(s)**

The table below shows the list of variables and indicators computed for the selected area. It may also reports any errors encountered during computation.

	Name	Value
MDv		
MDv11	Number of spatial data sets for Annex I that have metadata	55
MDv12	Number of spatial data sets for Annex II that have metadata	7
MDv13	Number of spatial data sets for Annex III that have metadata	104
MDv14	Number of spatial data services that have metadata	255
MDv1_DS	Number of spatial data sets that have metadata	166
MDv21	Number of spatial data sets for Annex I that have conformant metadata	0
MDv22	Number of spatial data sets for Annex II that have conformant metadata	0
MDv23	Number of spatial data sets for Annex III that have conformant metadata	0
MDv24	Number of spatial data services that have conformant metadata	0
MDv2_DS	Number of spatial data sets for all Annexes that have conformant metadata	0

Conclusions & perspectives

- > MIWP-16 works leads to a prototype of DAOBS application & european “official” dashboards**
- > DAOBS has been improved and adapted in order to evaluate INSPIRE implementation and SDI deployment in France → very important tool for making-decision !**
- > Perspectives of evolution :**
 - Implementation of common validation tools
 - Improve harvesting
 - Compute indicators in « real-time »
 - Supervision of catalogues
 - Identify duplicate/similarity/differences between catalogues

A geological map of the Monts d'Azun area, showing various geological units and structures. The map is oriented with North at the top. It features a central blue-shaded area representing a specific geological unit, surrounded by other units in different colors and patterns. The map is bounded by a blue line, and the coordinates 2113.21 5786 13.0 are visible at the top right and -1.89 3740.46 -625.5 at the bottom left. The text "Thank you for your attention" is overlaid in the center.

Thank you for your attention
