

Introduction to the NextGEOSS Project

Marie-Francoise Voidrot, Bart De Lathouwer
Open Geospatial Consortium Europe

Nuno Catarino
DEIMOS Head of Data Systems

NextGEOSS
GEOSS Interoperability workshop
28 August 2017

NextGEOSS overview

*... and its Contributions to Earth
Observation ecosystem
interoperability*

OVERVIEW : HIGHLIGHTS

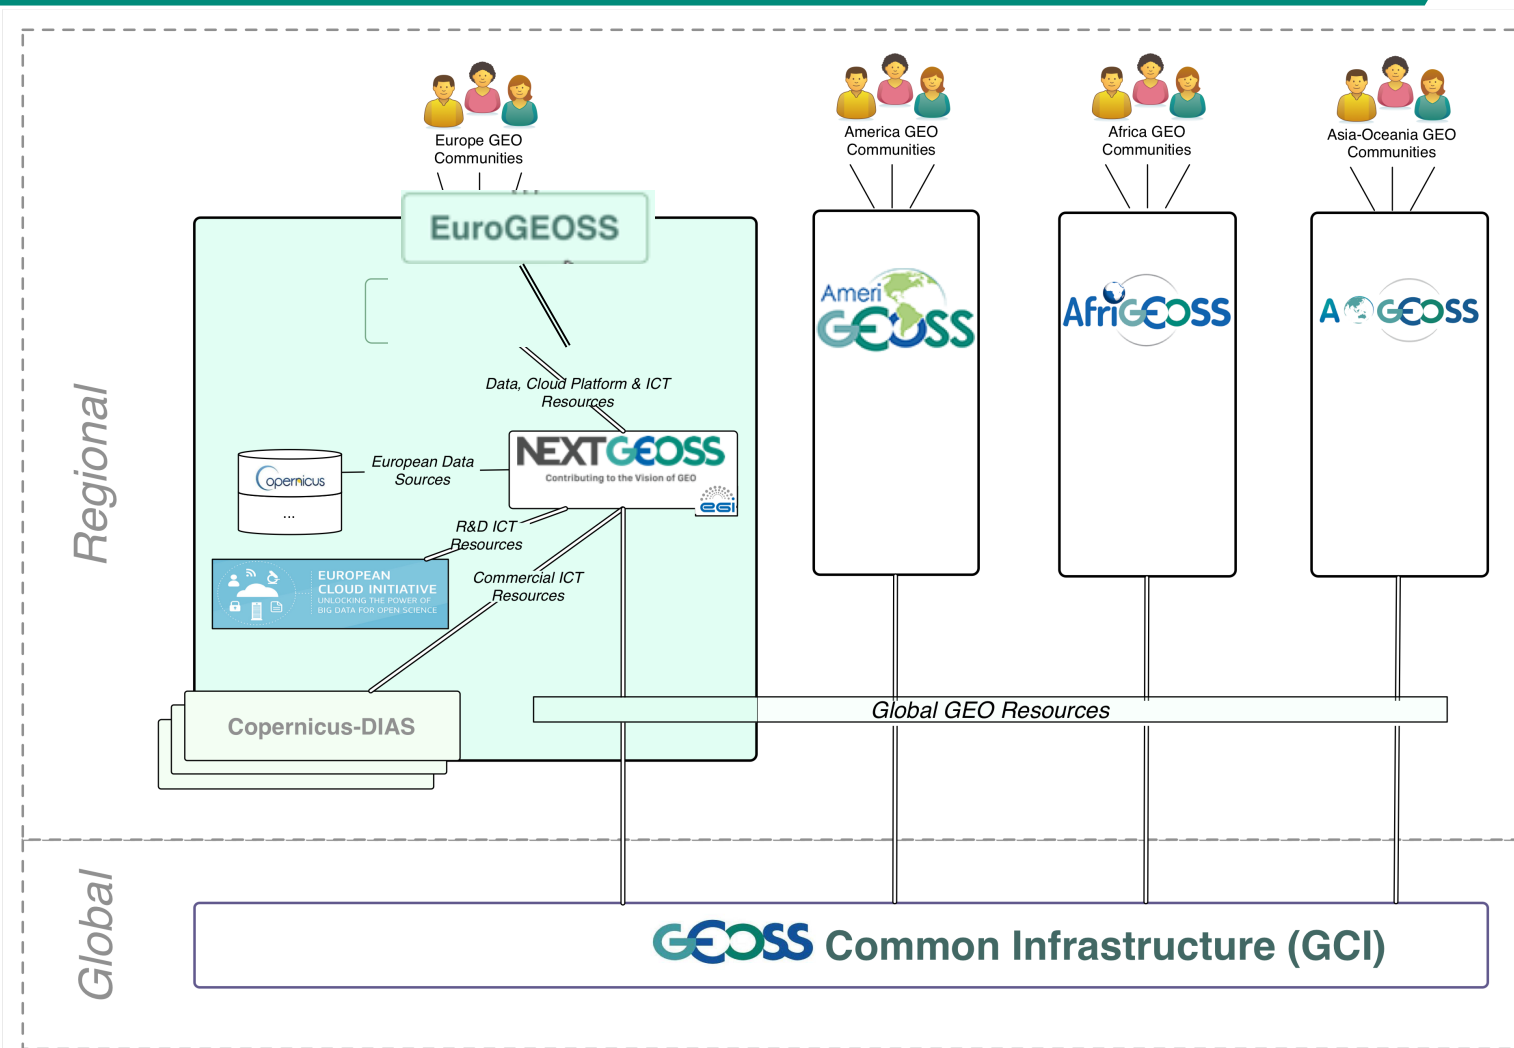

- H2020 SC5-20-2016 call: European data hub of the GEOSS information system
- European centralised hub for Earth Observation data and processing
- 10M€, 27 partners, 3.5 years, Kickoff January 2017
- The major European contribution to GEO in the next 3 years

OVERVIEW: EXPECTED RESULTS*

- improved user-friendly discovery, access and exploitation of EO data and information in Europe
- strengthened European regional approach to GEOSS
- broader uptake of GEOSS and Copernicus data, information and services
- increased EO-driven innovation and business opportunities for European SMEs and companies
- wider commercial exploitation of EO data and products beyond sectors not traditionally engaged in EO
- increased European capacity to address GEOSS societal challenges of prime importance to the EU
such as achieving the post-2015 sustainable development goals or implementing adaptation and mitigation strategies to climate change

**http://cordis.europa.eu/programme/rcn/700756_en.html*

OVERVIEW: LINK WITH EUROGEOSS

NextGEOSS OBJECTIVES

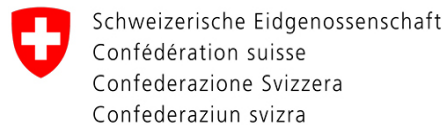

NextGEOSS Objectives

- 1. Engage** communities
promoting innovative GEOSS powered applications from Europe
- 2. Deliver** the next generation data hub
and Earth Observation exploitation for innovation and business
- 3. Advocate** GEOSS as a sustainable European approach
for Earth Observation data distribution and exploitation

NextGEOSS TIMELINE

NEXTGEOSS
Contributing to the Vision of GEO

NEXTGEOSS

Contributing to the Vision of GEO

CURRENT STATUS & ONGOING

NEXTGEOSS
Contributing to the Vision of GEO

- Initial deployment of catalogue & definition of metadata
- Interfaces & harvesting of datasets
Sentinels, Copernicus Marine, Land & Atmosphere, Citizen Observatories & Commercial Data
- Preparing for integration of NextGEOSS pilots - **AIP**
- Starting engagement of communities, datasets & future pilots
- Development environment (Sandbox) to develop and test algorithm and workflow before deployment on Cloud environment

Develop & Test

Overview

System

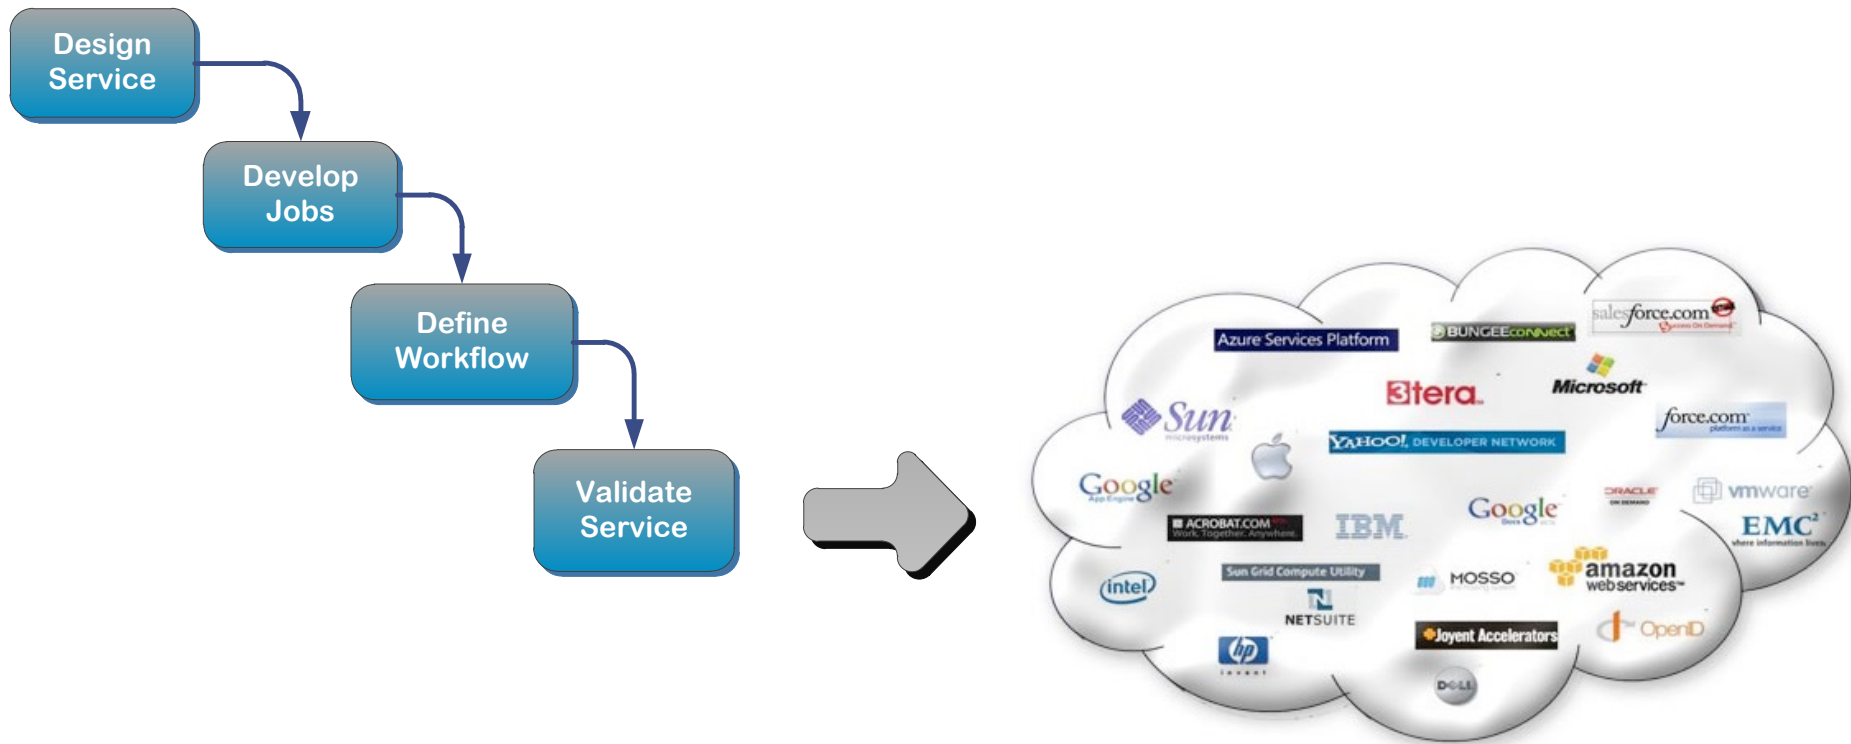

Development & Integration

Pilots

Engagement & Dissemination

CLOUD INTEGRATION

DEVELOP/DEPLOY SERVICES STEPS (AIP)

OTHER MAJOR VALUES ADDED

- **CITIZEN OBSERVATORIES**
=> Standardization to make data available and reusable
- **USER FEEDBACK**
=> to go towards the “fit for use”
- **CAPACITY BUILDING**

PILOTS - AIP

Communities, promoting innovative GEOSS powered applications from Europe

- **Engage the GEO and European communities** towards understanding their needs, working together with GEO and Open Data policies
- Identify regional champions for **innovative pilots** and **business oriented pilots**
- **Collect feedback**, expectations and requirements from the public and private communities
- Target **Essential Variables** towards the SDGs

NextGEOSS PILOTS

NEXTGEOSS
Contributing to the Vision of GEO

Innovative Pilots

IP1
Agricultural
Monitoring

IP2
Biodiversity

IP3

BP4.1/2
Energy*

Overview

System

Development & Integration

Pilots

Engagement & Dissemination

IP1: Time Series Analysis for Agricultural Monitoring

VITO – Alterra – UAB

NEXTGEOSS
Contributing to the Vision of GEO

Pilot Scope

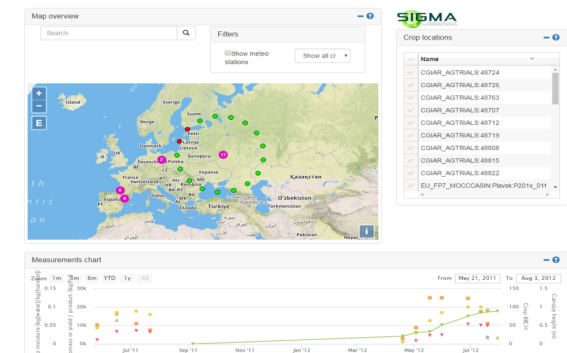

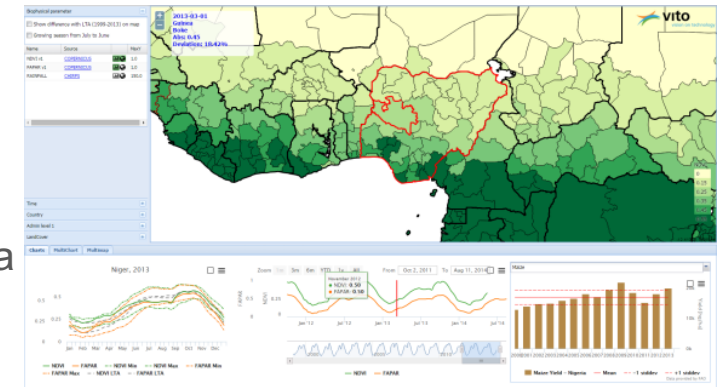

- Scale up Time Series analysis tools to huge amounts of HR EO-data
- SAT EO-data & in-situ data

Pilot Objectives

- Extend Proba-V MEP & Copernicus Global Land Time Series Viewer with Sent-2 derived VGT indices
- REST and/or WPS end-points → WP3
- Extend prototype of Agro STAC (Spatial Temporal Catalogue for Agronomy) from FP-7 SIGMA → towards operations
- Temporal and attribute accuracy on WM(T)S: guidelines and prototype

Challenges

- Integrate with processing chains & data on public clouds
- Transfer to operations (in-situ)

IP2: Biodiversity

NEXTGEOSS
Contributing to the Vision of GEO

ALTERRA
WAGENINGEN UR

University of Twente
The Netherlands

UAB
Universitat Autònoma
de Barcelona

Pilot Scope

- Essential Biodiversity Variables (RS-EBVs) for habitat mapping and monitoring

Pilot Objectives

- demonstrate the value of an European Data Hub for the creation of **RS-EBVs**, which leads to creating a GEOhub for EBVs by linking the key policy/user network groups (GEO-BON, CBD and IPBES) with the space agencies.
- demonstrate the use of the European Data Hub in terms high resolution RS-EBVs for **habitat mapping (distribution, suitability and probability)** in order to support the European Environment Agency (EEA) and its Topic Centre for Biological Diversity (ETC-BD). The integration of EO data with in-situ observations, vegetation relevés, will play an important role.

Challenges

- Incorporation of several RS-EBVs (e.g. phenology) to improve the distribution mapping of EUNIS habitats.
- How far can we integrate different aspects of the developed habitat modelling method (data & models) into Cloud Sandbox Solution?

Distribution →

Suitability →

Probability

IP5: Air pollution, Urban Growth, Health Risks in Megacities

NEXTGEOSS
Contributing to the Vision of GEO

Pilot Scope

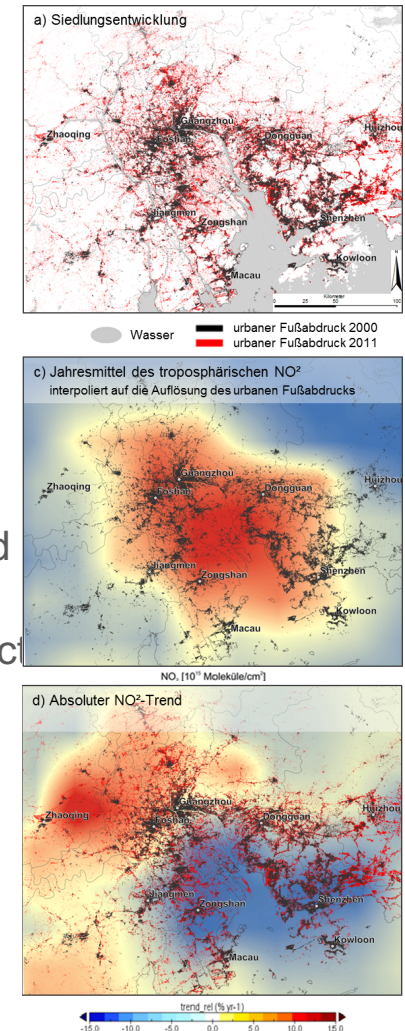

- Analysis of air pollution trends, urban growth rates and health risk indicators for megacities by integrating EO data with the nextGEOSS infrastructure
- New inputs from Sentinel-3, -5P, CAMS, WDC/RSAT

Pilot Objectives

- Develop a multi-sensor approach to analyse air pollution variability in megacities linked urban growth rates
- Develop a tool to analyse local trends and health risks using the NextGEOSS infrastructure
- Exploit Copernicus data and services (Sentinel-3, -5P, CAMS)
- Strengthen the link to the health community

Challenges

- Integrate with Copernicus data hubs and processing chains

Pilot Scope

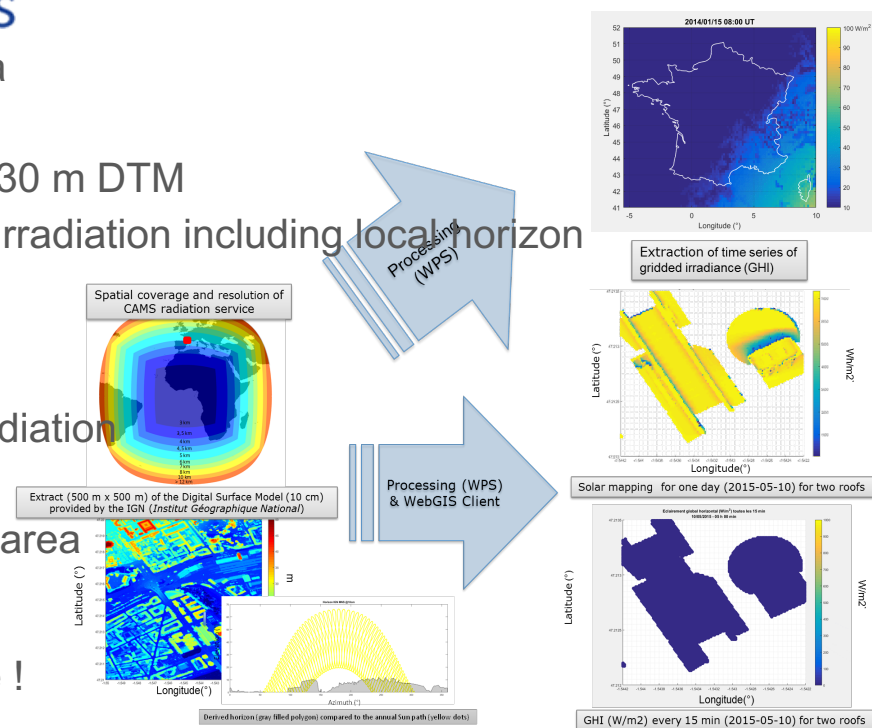

- **Constructing gridded data for grid operators**
- Process CAMS services to provide time series of gridded data
- **High resolution solar mapping at urban scale**
- Process and combine CAMS with 10 cm resolution DSM and 30 m DTM to provide geo-localized patches of time series of global tilted irradiation including local horizon

Pilot Objectives

- **Constructing gridded data for grid operators**
- Enabling access to nation-wide gridded time series of solar radiation
- **High resolution solar mapping at urban scale**
- Enabling on-the-fly high resolution solar mapping of an urban area

Challenges

- NextGEOSS cloud based solution to reduce computation time !
- **Constructing gridded data for grid operators**
- Currently 15s per point. Need to address 1000km x 1000km area of 10 km grid cells (10k cells at the same time)
- **High resolution solar mapping at urban scale**
- To access real-time rendering of local solar mapping for an urban area of interest.
Currently, 400 s is required for a zone of 100 m x 100 m

GETTING INVOLVED

NEXTGEOS
Contributing to the Vision of

Main Project Events

Summits:

- An annual event in the second quarter of each year (4 in total)

Trainings:

- One online training event per year (3 in total)

Architecture Implementation Pilots (AIPs):

- 2017, 2018, 2019

+ Presence in other events

- INSPIRE, Sept 2017
- GEO Plenary, October 2017
- BIDs 2017, November 2017 ...

2nd Summit: Mid 2018

1st Training: 13th Sep 2017

Univ. Reading & Online
User Feedback and DRR

AIPs: 2017 (Plenary)

Contact us if interested

Presence in other events:

Come to us

Engagement & Dissemination

«NextGEOSS is not just another H2020 project»

- Major contribution to EuroGEOSS regional GEOSS implementation
- User Focus through Pilots
- Design and development environment for easy Cloud deployment and scalability
- Capacity building events : webinars, training courses ...
- Broad engagement including business
- Open Source deliverables

Thank you!
