

# Cross-border data consistency , an INSPIREd first step to connect your country to cross-border digital economy. Best practice examples from National Mapping Agencies

Nathalie Delattre (IGN Belgium), Pierre Vergez (IGN France)

INSPIRE Conference, Strasbourg 6-8 septembre 2017

# Outline

1. The meaningfulness

2. The  
EuroGeographics  
approach and solutions

3. From theory to  
practice

4. Applied processes  
for a common  
boundary

5. Applied processes  
for edge-matching

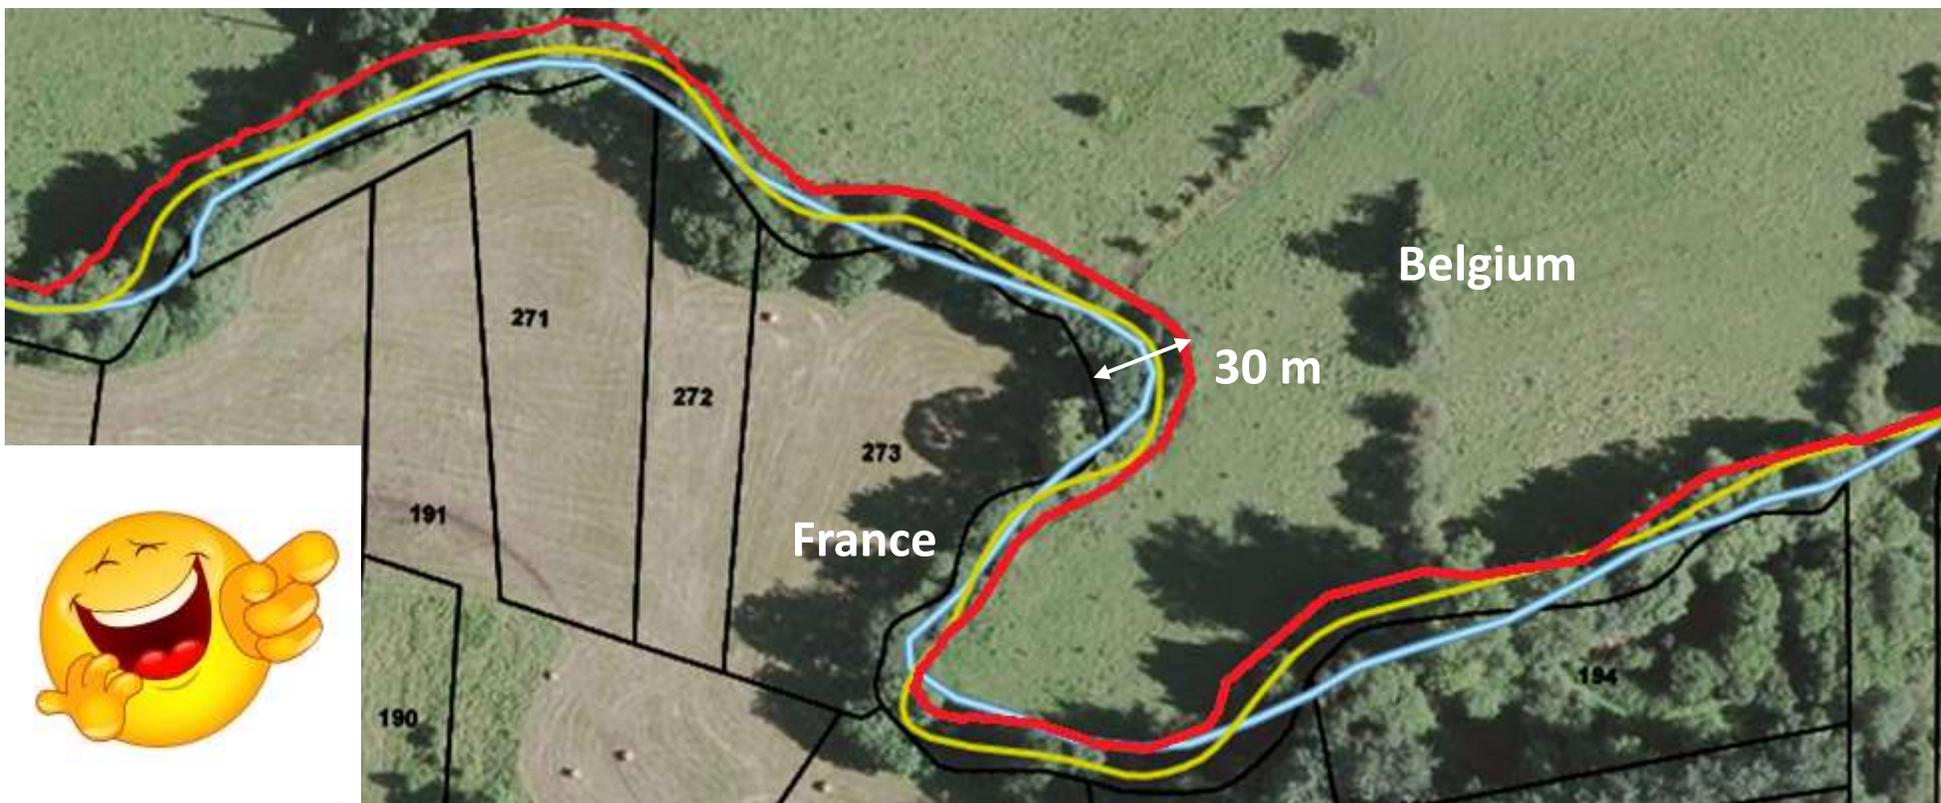

6. The message

1. The cross-border meaningfulness
2. The EuroGeographics approach and solutions
3. From theory to practice
4. Applied processes for a common boundary
5. Applied processes for edge-matching
6. The message

# 1.1 Common boundaries, you mean?

## 1. The meaningfulness

National boundaries  
( Cadastral Agencies )

— Belgium

— France

River boundaries  
( Mapping Agencies )

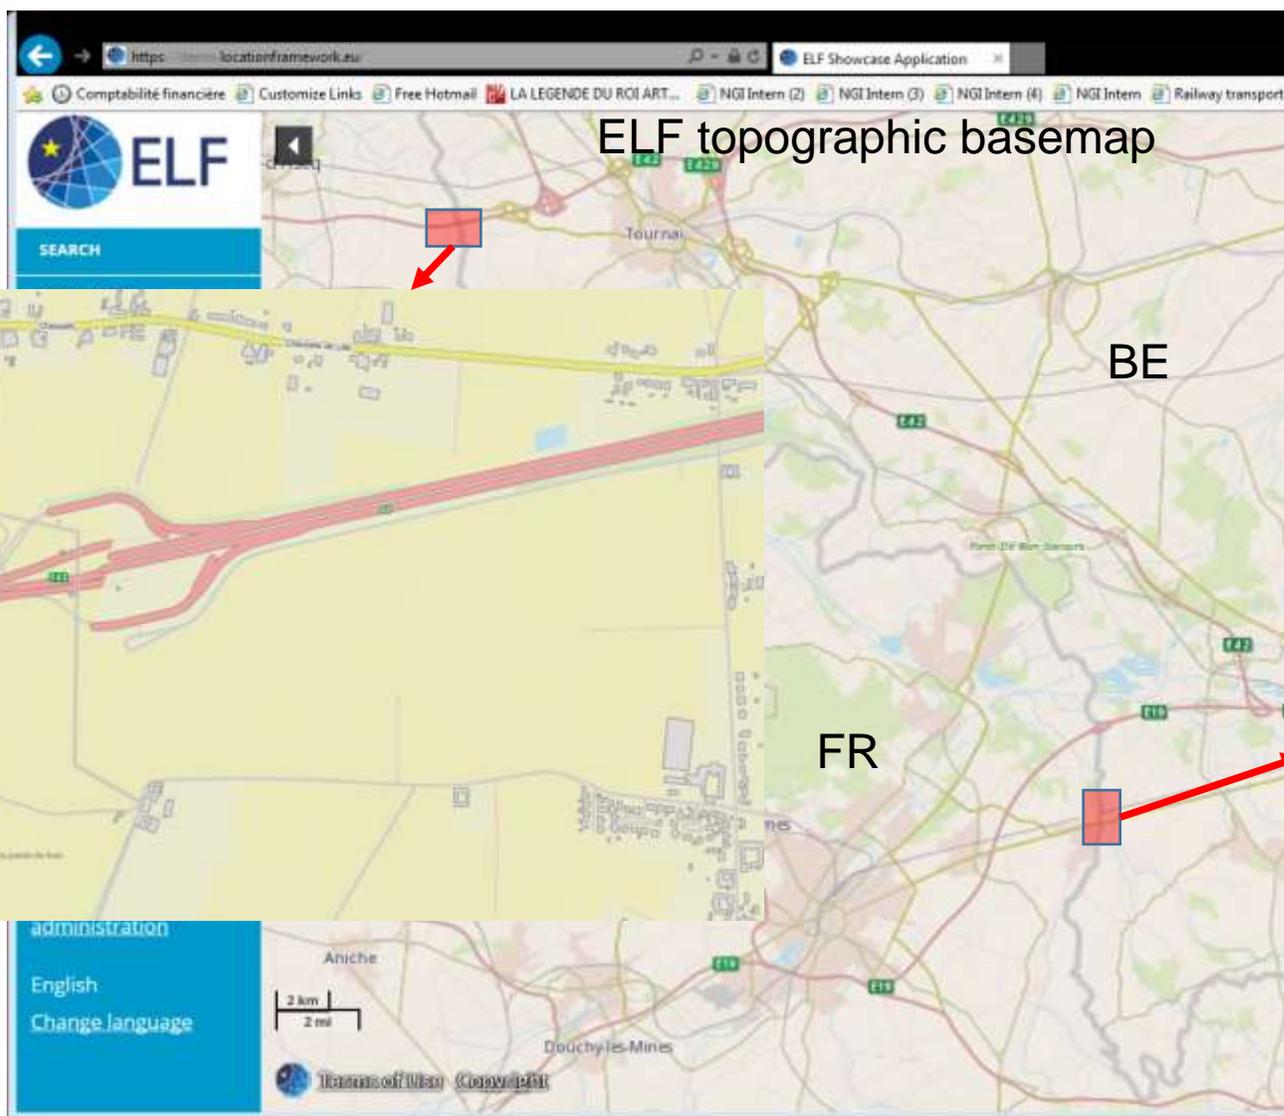

— Belgium

— France

INSPIRE Directive Article 10.2 : Data Interoperability across Boundaries

# 1.2 Cross-border digital data, you mean?

## 1. The meaningfulness

## 2.1 Common International « Borders » at Different LoDs

### 1 2. The EuroGeographics approach and solutions

Level of detail	Scale	Type of data (accuracy)	Kind of agreement	realisation	Availability
Treaty level	Cadastral resolution	High precision,	Legally defined boundaries	<b>SBE project</b> (long term goal)	Starting
Master	1:10k to 1:50k	From cadastral or master national datasets	Technical compromise , <b>border depiction</b> adapted to the LoD	<b>ELF IB Master</b>	Starting
Regional	1:100k to 1:250k	From pan European datasets : EuroRegionalMap and EuroBoundaryMap		<b>ELF IB Regional</b>	Nearly available for all countries , <b>restricted access</b>
Global	1:500k to 1:2M	EuroGlobalMap	Generalised from ELF IB Regional	<b>ELF IB Global</b>	Available for all countries; <b>public access</b>

Activities split

## 2.2 Set up Connecting Features (CFs)

### 1 2. The EuroGeographics approach and solutions

- Point or line
- Located on boundaries
- Set up at different LoD

## 2.3 Data Model INSPIRE Compliant

1

### 2. The EuroGeographics approach and solutions

- ELF IB data model specifications + Application Schemas GML

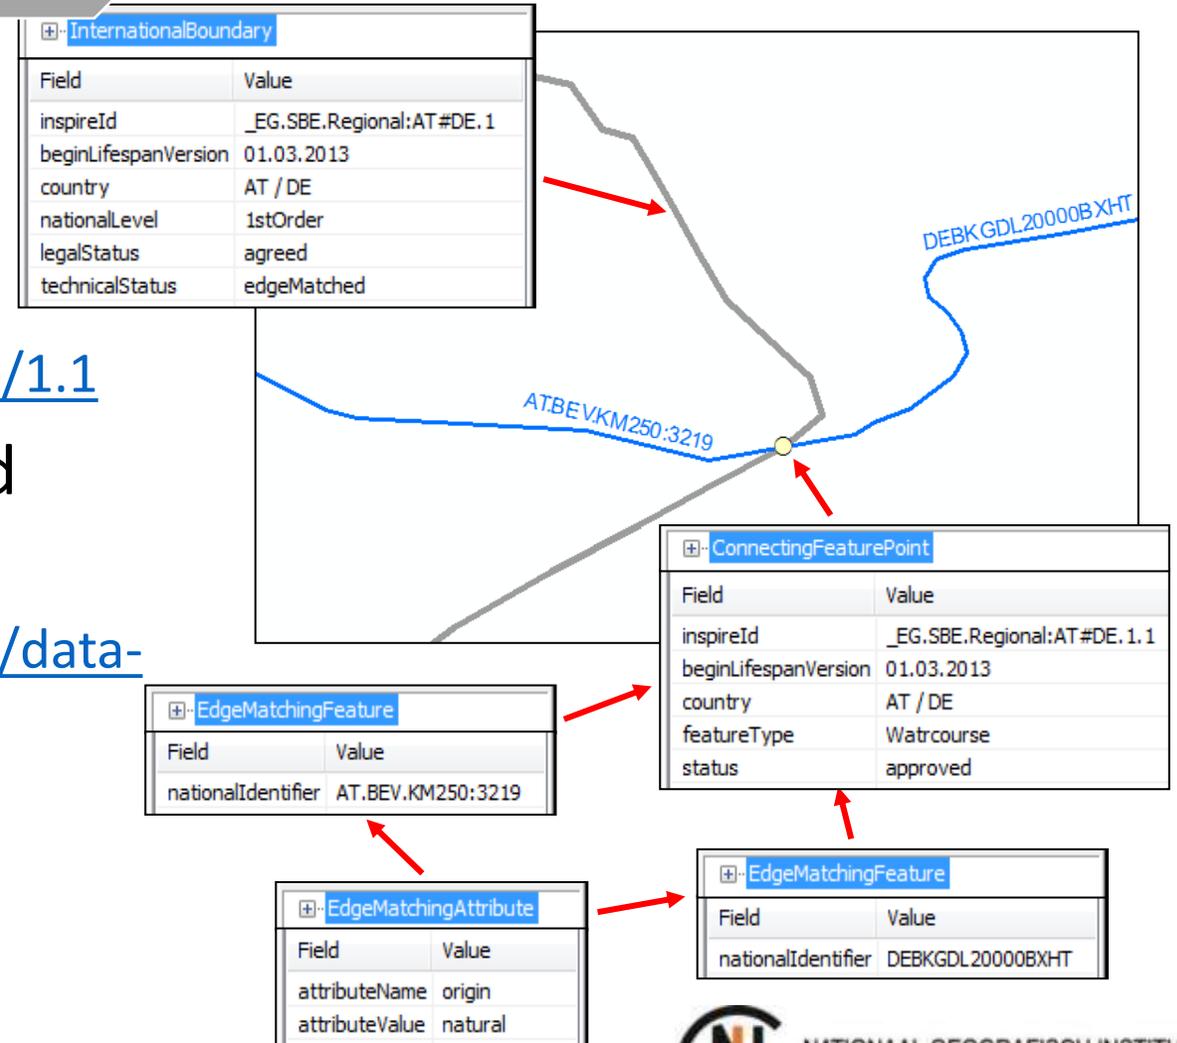

at:  
<http://elfproject.eu/documentation/specification/ib/1.1>

- Edge-Matching Technical guidelines and Evaluation rules (docs)

at:<http://elfproject.eu/documentation/specification/data-maintenance-and-processing>

- ELF EM Tools (testbed) by 1Spatial (1Integrate)

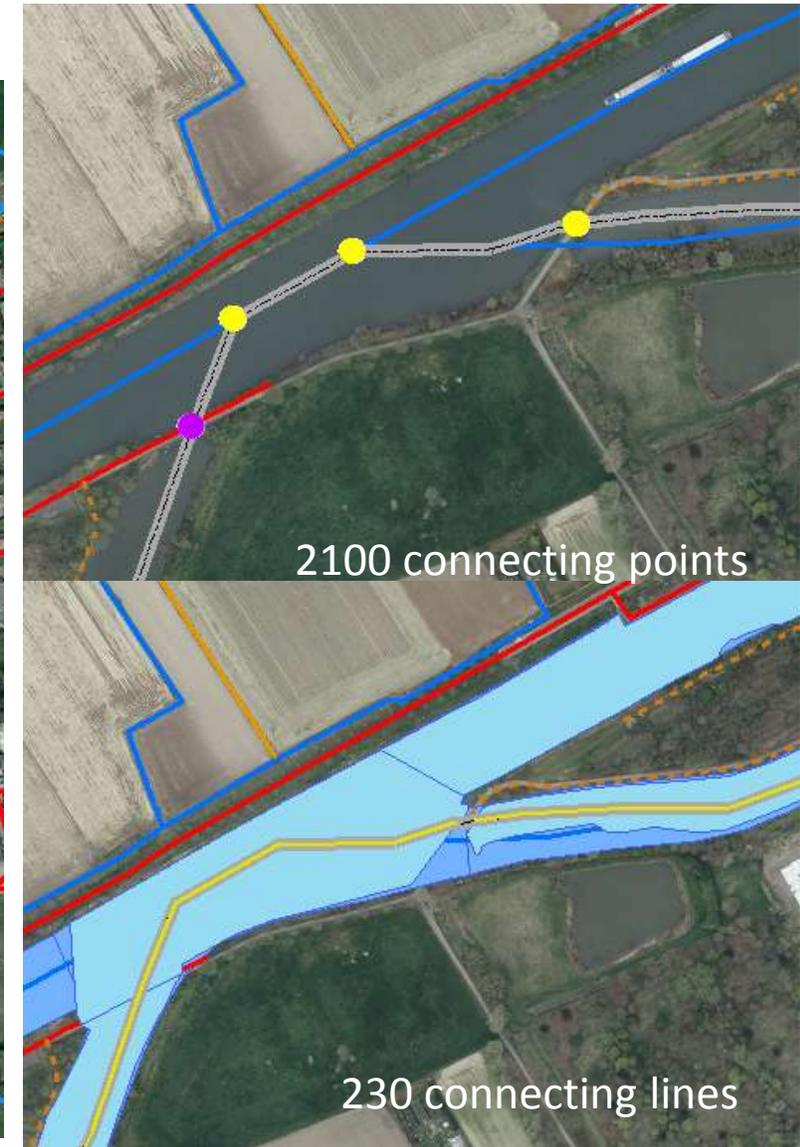

restricted access

# 3.1 Best Practices Examples BE/FR

1. 2. 3. From theory to practice

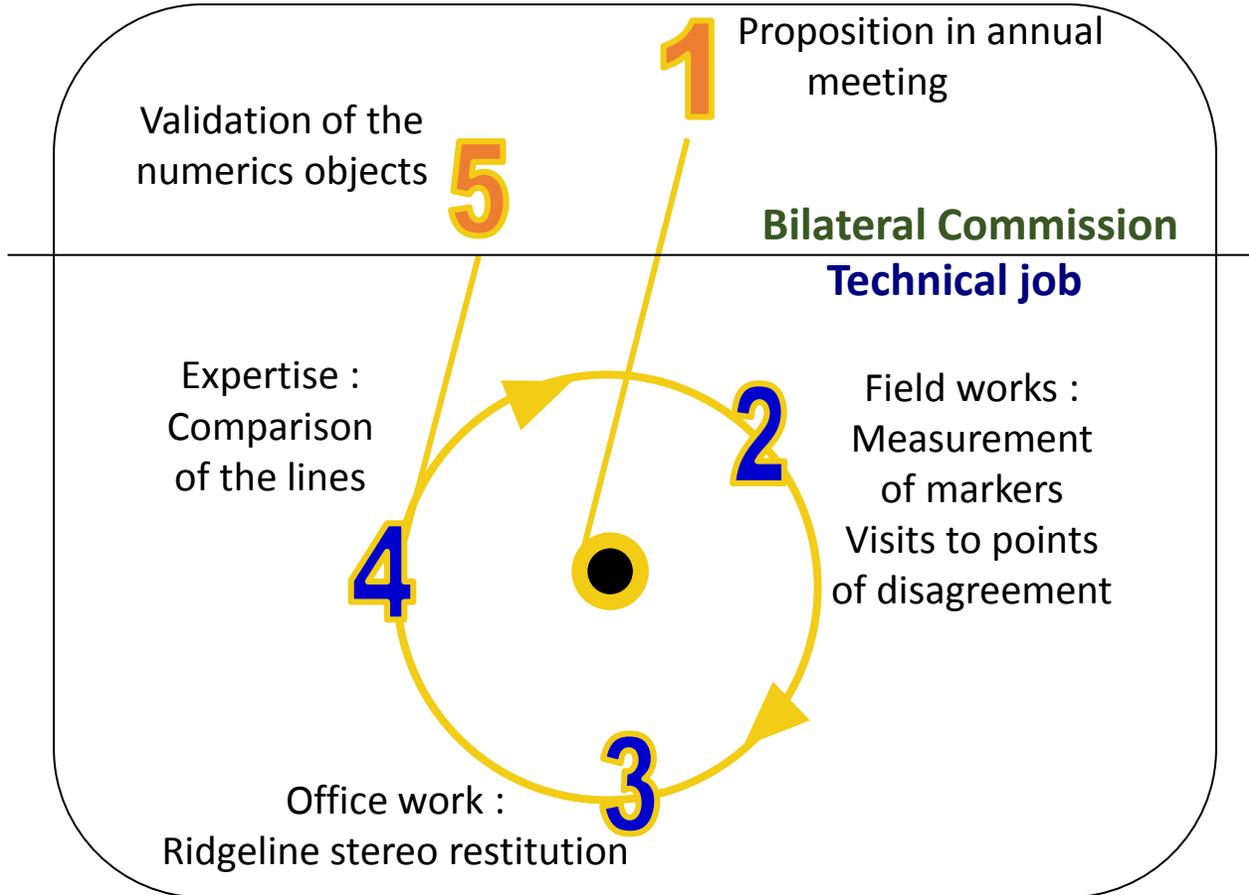

- to agree on a common depiction of the State Borders at master level (ELF IB master)
- to edge match the national master data bases at 1:10 000 scale for
  - Hydrography (HY),
  - Transport (TN)
  - Buildings (BU)
- Start 2016
- 2017 (first results with point CFs)

# 4.1 From Technical to Juridical Agreement

1. 2. 3. 4. Applied processes for a common boundary

Validation type of agreement

0) Dispute area

1) Technical agreement

2) Bilateral juridical agreement

3) Geodata & bilateral cadastres OK

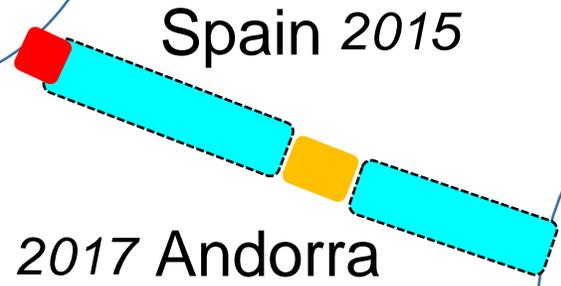

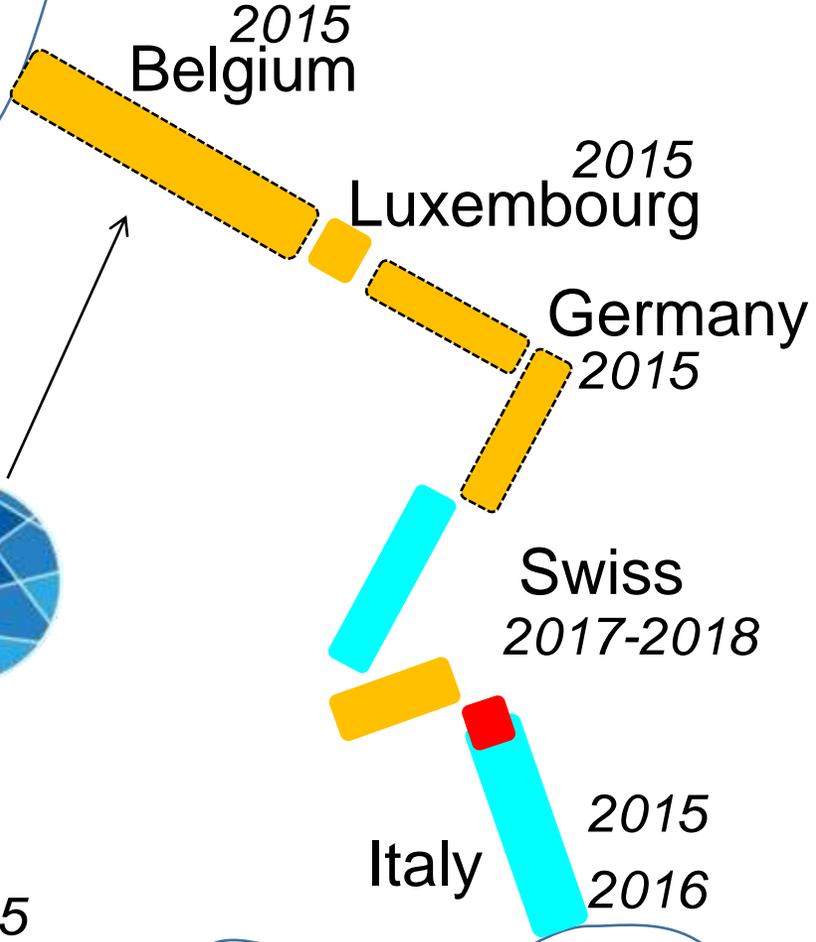

# 4.2 Shared Lines in ELF Database

Edge-matching on going (Belgium and Spain)

- Technical agreement
- Juridical validation
- Postponed => 2 lines
- Temporary solutions

## 4.3 What's a Temporary Solution ?

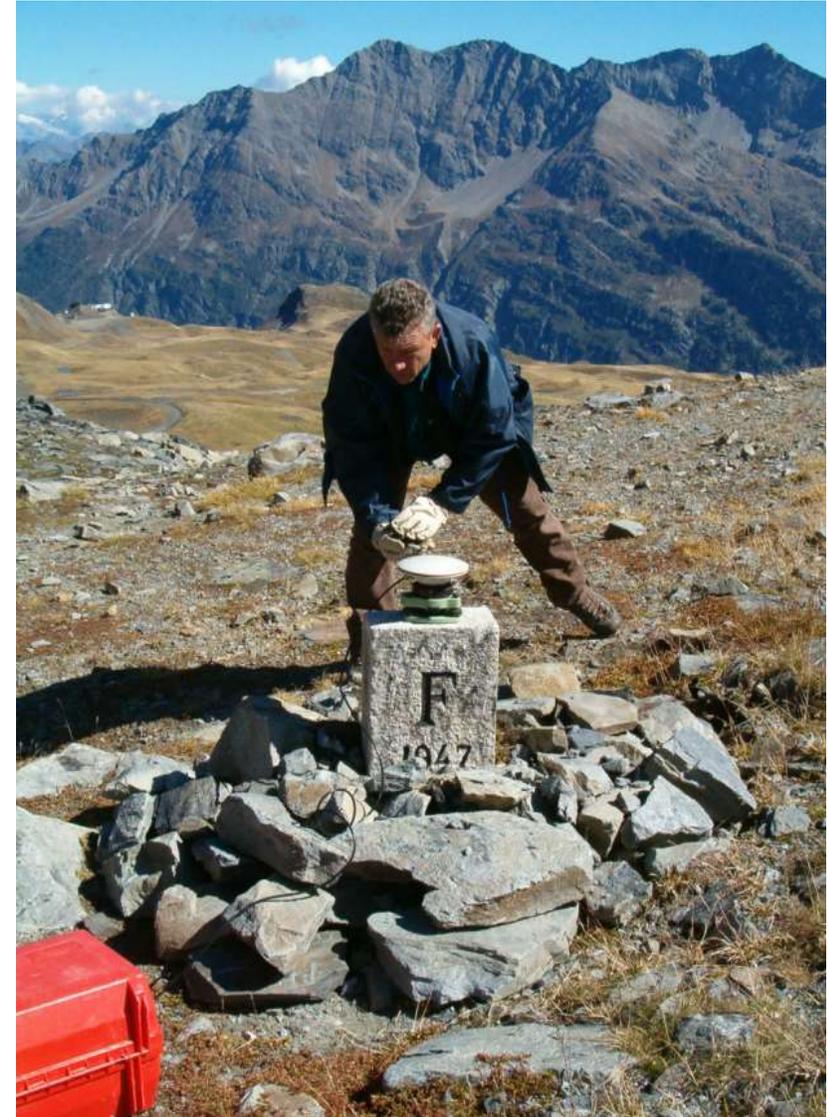

1. 2. 3. 4. Applied processes for a common boundary

Agreement with scheduled actions

- Ex : take time to measure the marks
- Ex : waiting for better ortho

Technical agreement better than intermediate solutions

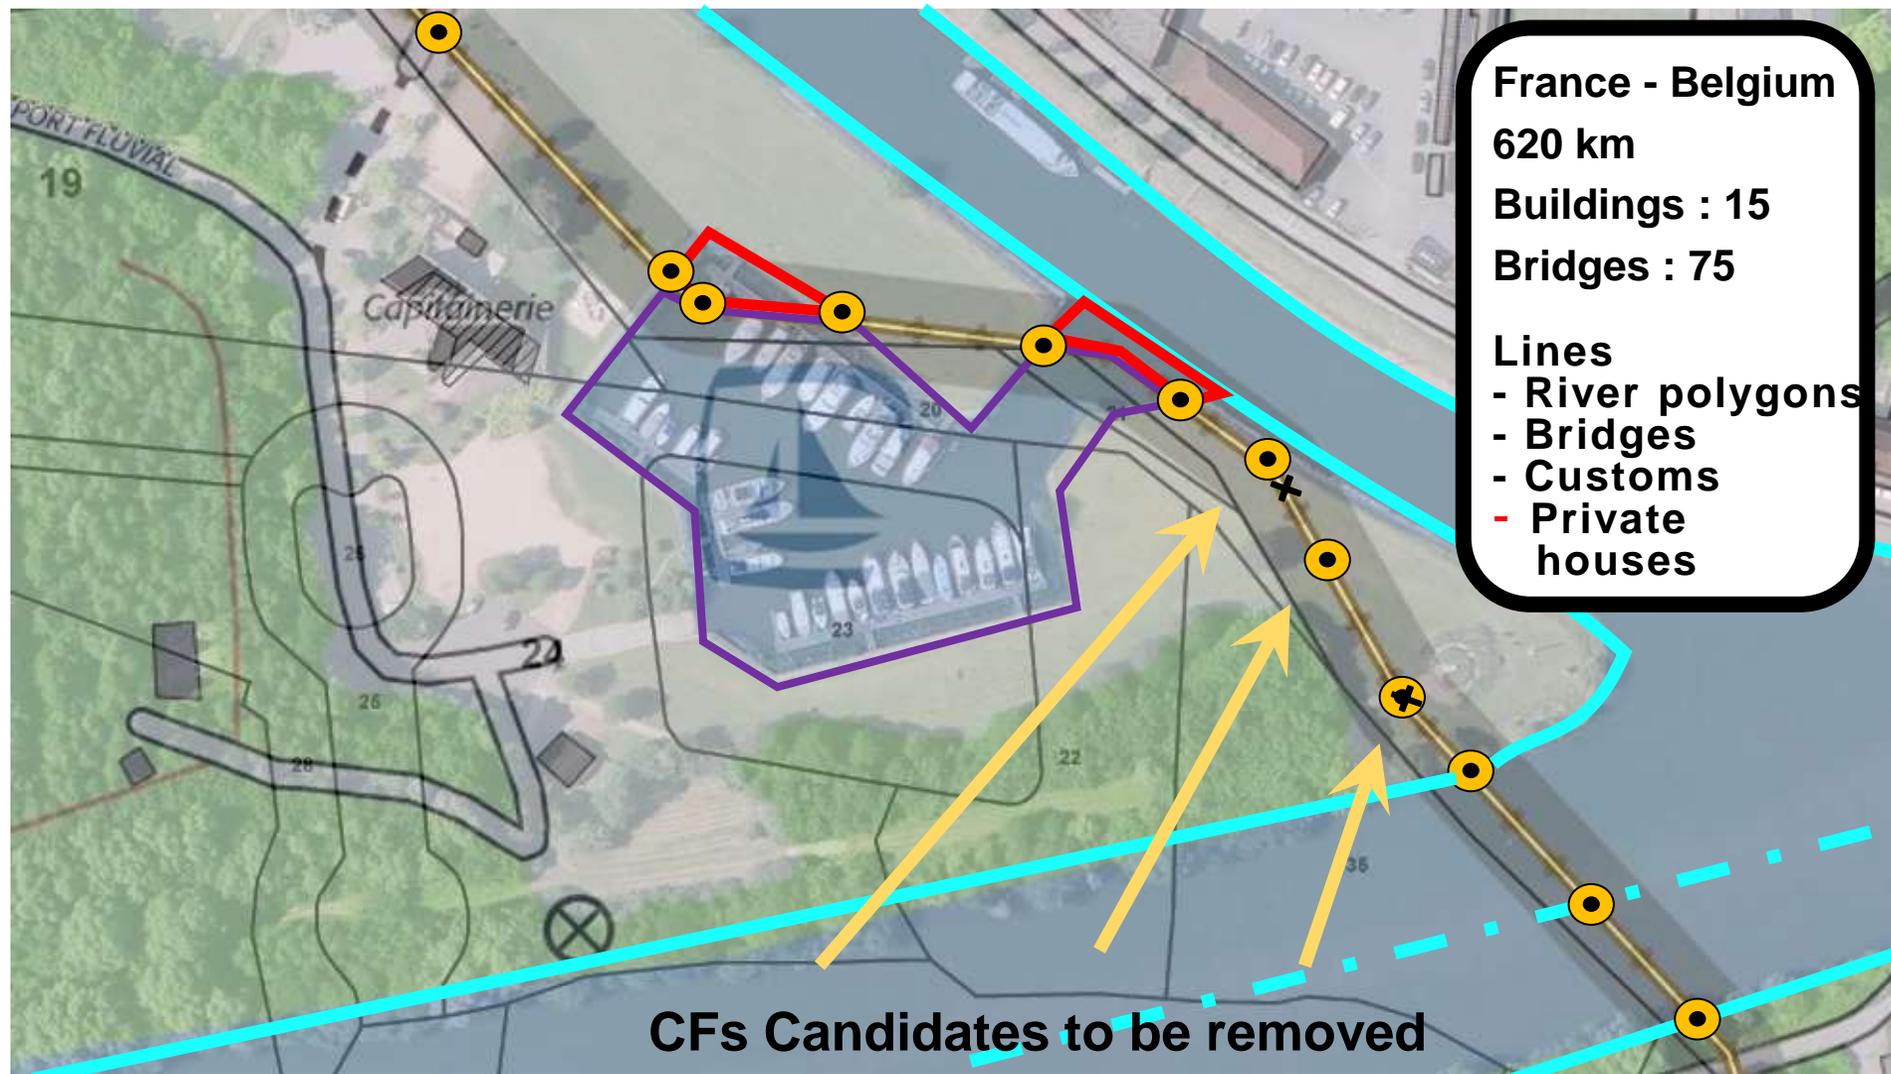

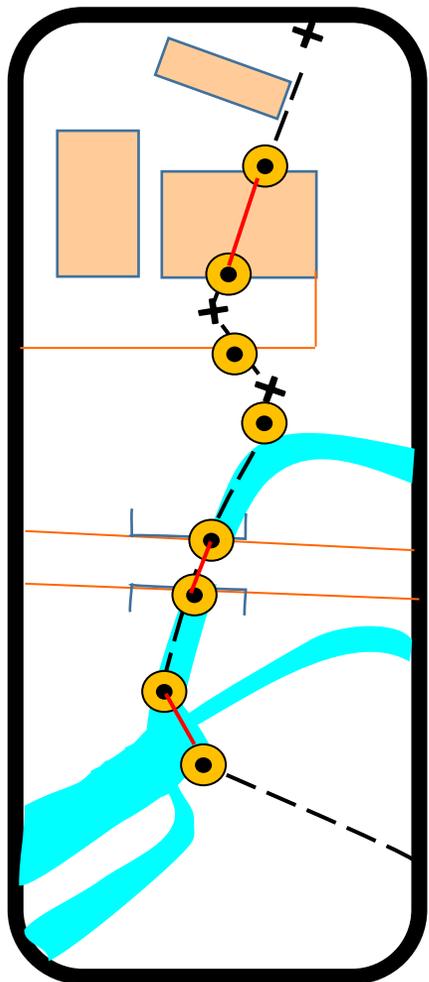

⇒ List a count of the gap discrepancies  
and balance the distribution of compromise

# 5.1 Edge Matching : CFs Candidates

- 1
- 2
- 3
- 4
- 5. Applied processes for edge-matching

● : CFs Candidates  
✕ : Boundary Marks

France - Belgium  
620 km  
Buildings : 15  
Bridges : 75  
Lines  
- River polygons  
- Bridges  
- Customs  
- Private houses

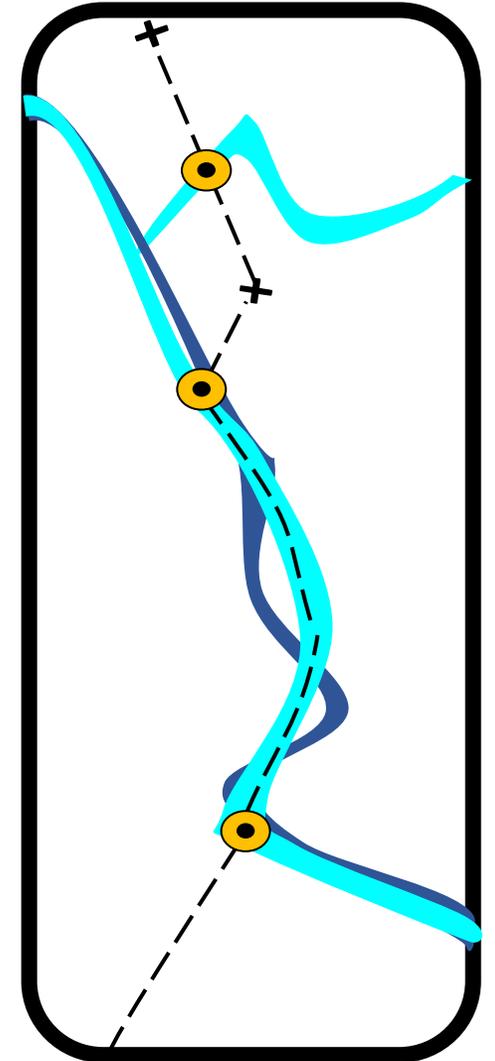

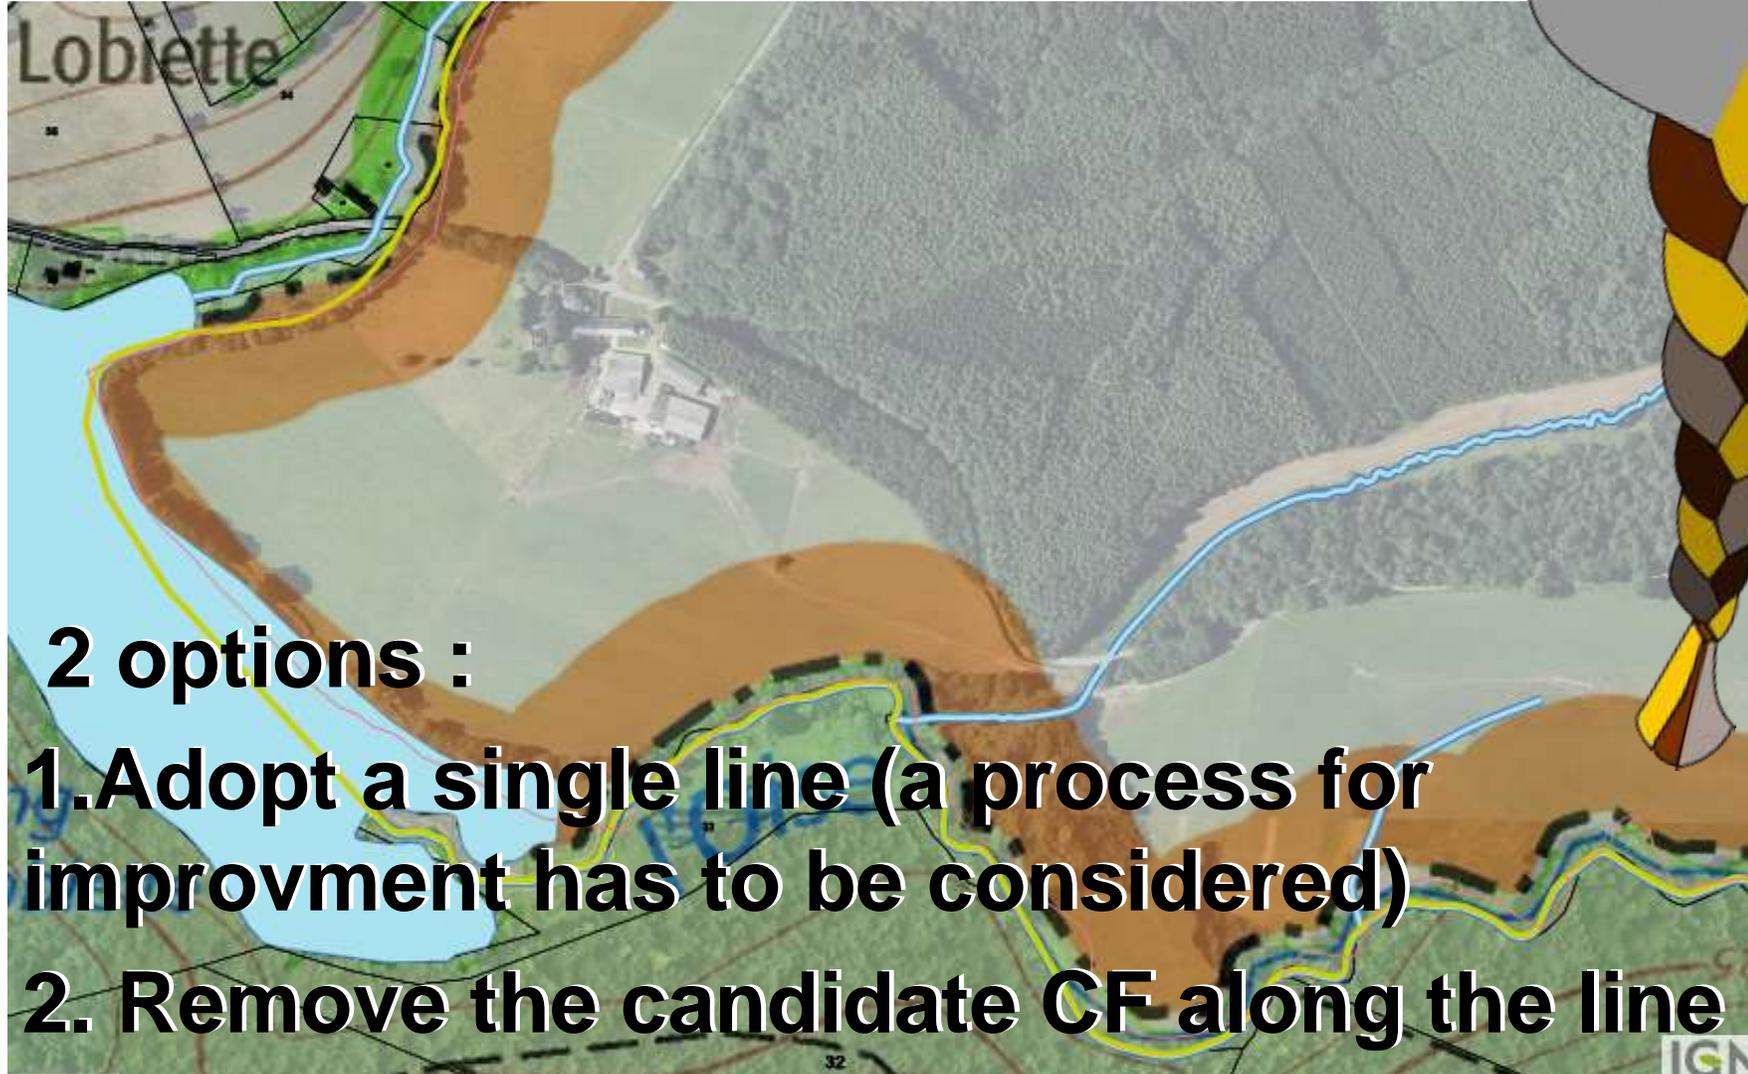

CFs Candidates to be removed

## 5.2 Edge Matching : Braided Geometry

1 2 3 4

5. Applied processes for edge-matching

## 5.3 Edge Matching : Organisational Process

1 2. 3 4 5. Applied processes for edge-matching

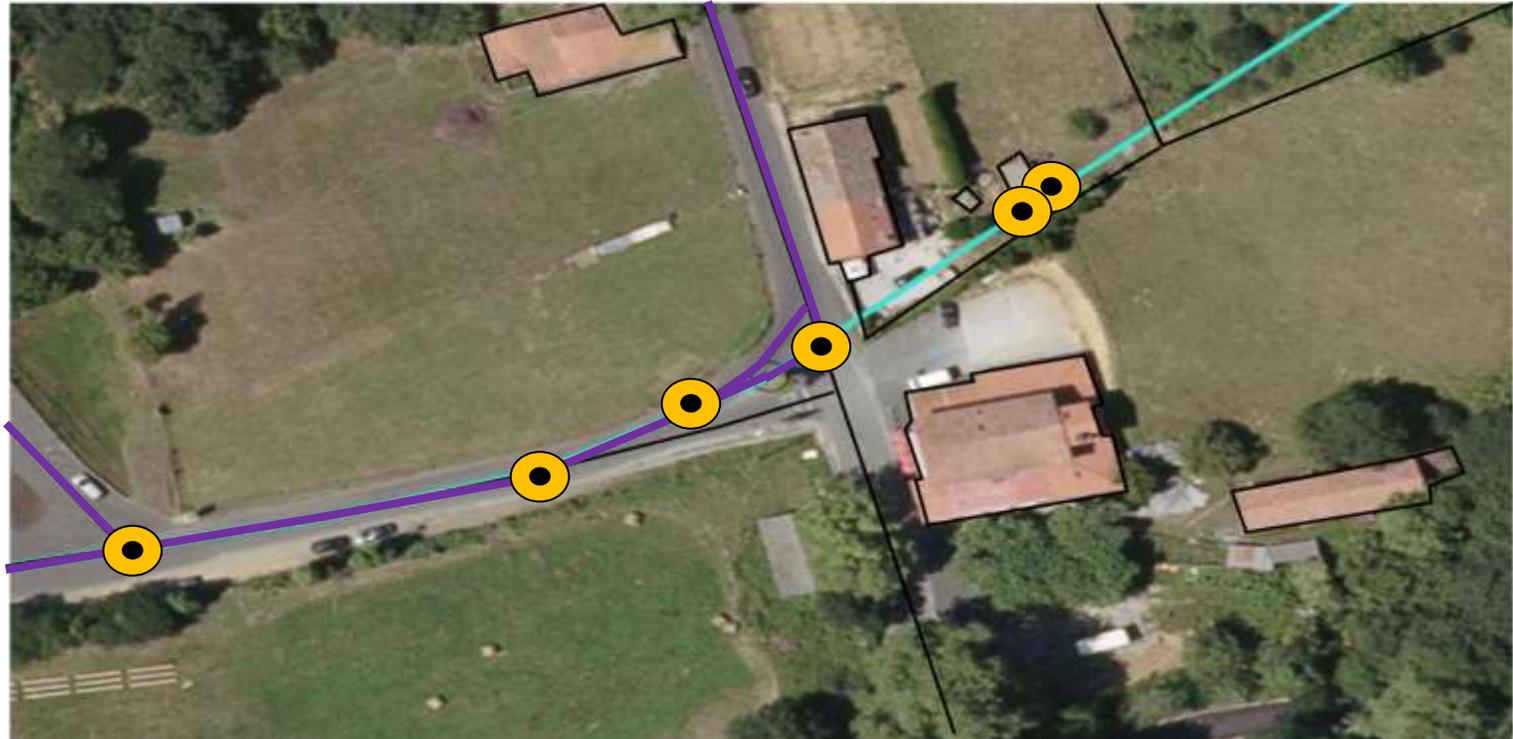

### BOUNDARY UPDATE MANAGEMENT for France

- Modifications of the line in the source database
- Annual national update  
(displayed 3 months later in portals)
- Delivered to ELF platform

case of **Agreed line = National line**

### EDGEMATCHING

- Extraction for comparison
  - Connecting features
  - Neighboring objects
  - Single shared line
- Negotiation and geometry change proposals
- Updates in source database

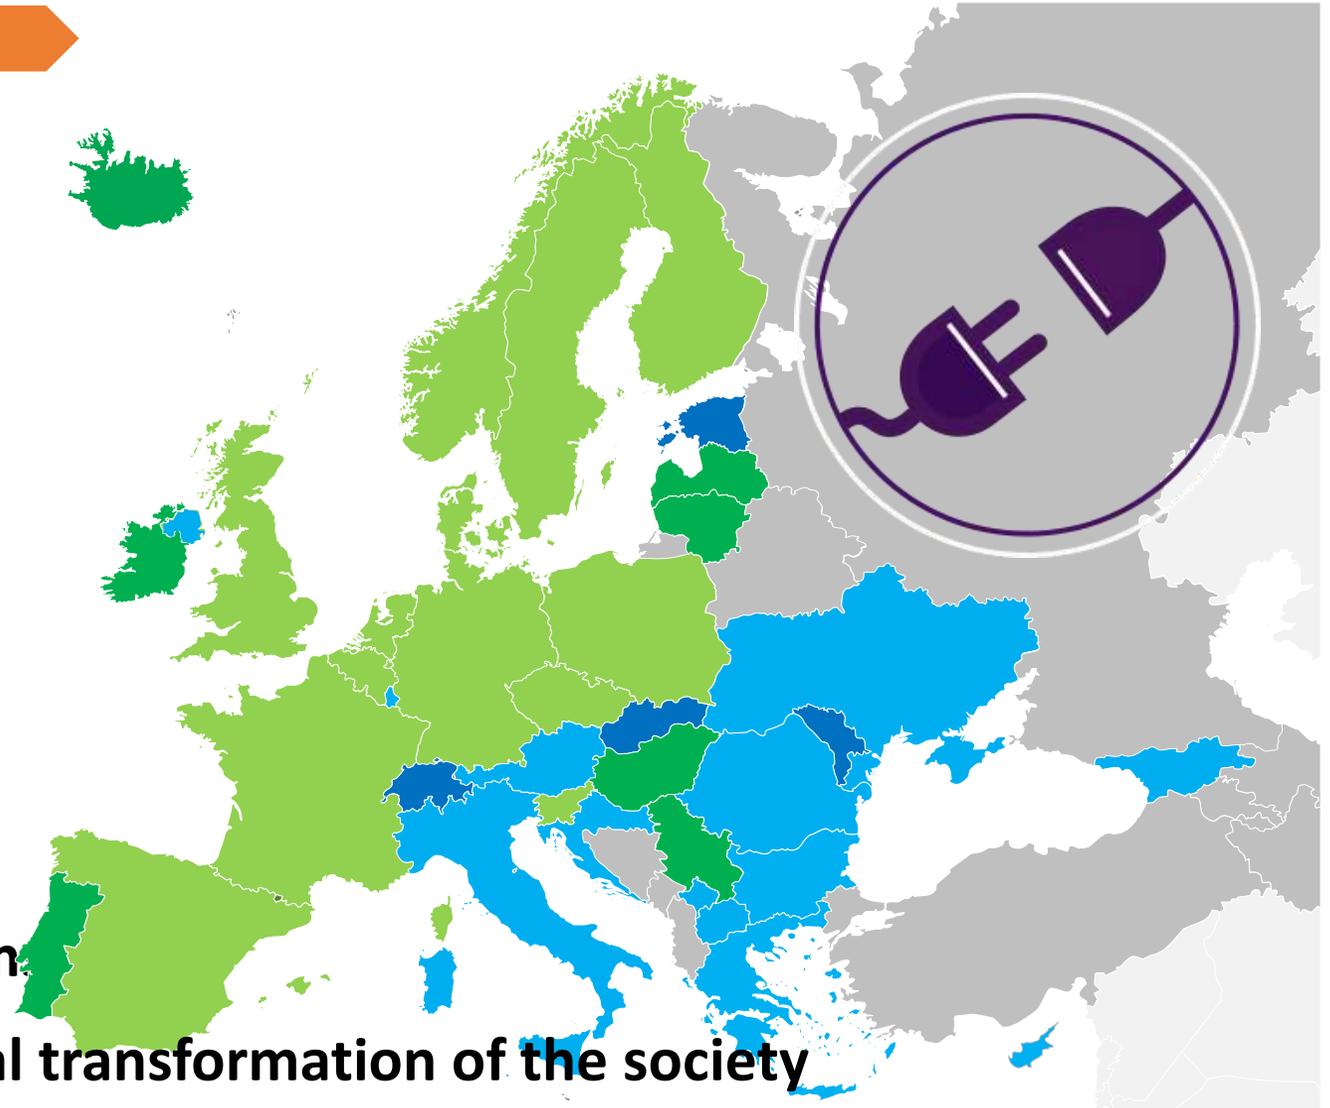

resolved case with Connecting features

# 6.1 A Plugin Outlet

- 1.
- 2.
- 3.
- 4.
- 5.
- 6. The message

## ELF Data Providers in 2016/17

**A plugin outlet for matching and extension:**

**ELF platform aims at supporting the digital transformation of the society**

**Towards an European set of connected data from NMCAs enabling pan-European (public or private) applications**

# Towards qualified open spatial data support for digital policy and economy

EIF Project  
European  
Location  
Framework

2016

2018

2020

United  
Nations  
Initiative  
on Global  
Geospatial  
Information  
Management

WHAT PRIORITY? data  
for  
Reporting

data sets  
needed to  
produce report

data sets needed  
for implementation

**Cross border** data sets

**the INSPIREd first  
step ?**

**THANK YOU!**
